      <td><?= $value['name'] ?></td>
      <td><?= $value['chinese'] ?></td>
      <td><?= $value['english'] ?></td>
      <td><?= $value['math'] ?></td>
      <td><?= $value['sum'] ?></td>
      <td><?= $value['avg'] ?></td>
    </tr>
  <?php endforeach; ?>

```

Input Text value Property

< Input Text Object

Example

Change the value of a text field:

```
document.getElementById("myText").value = "Johnny Bravo";
```

Try it Yourself »

jQuery val() Method

< jQuery HTML/CSS Methods

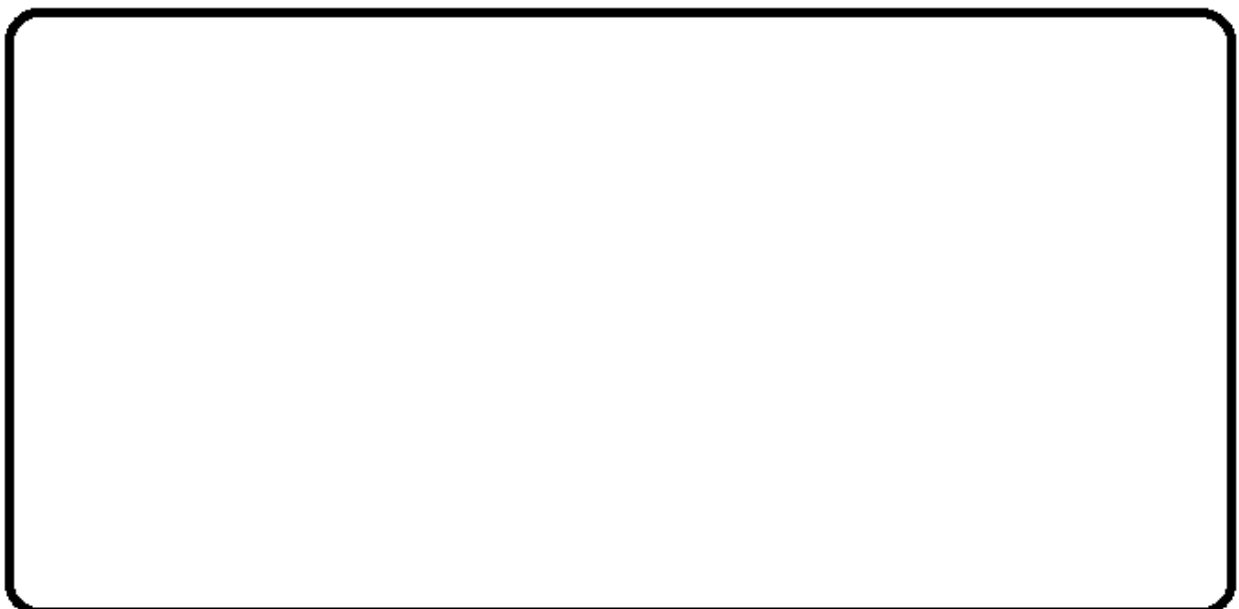

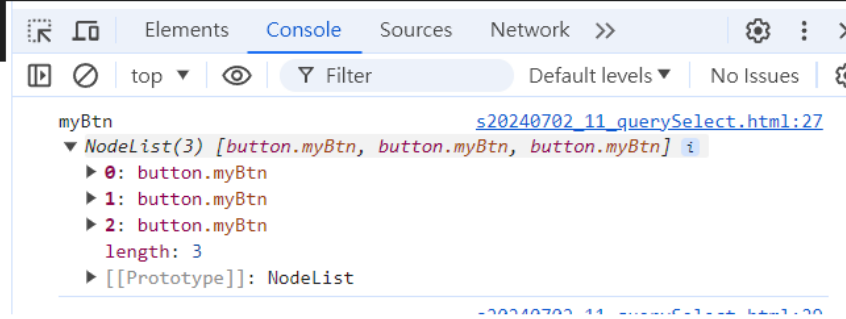

Example

Set the value of the `<input>` field:

```
$("#button").click(function(){  
    $("#input:text").val("Glenn Quagmire");  
});
```

Try it Yourself »

```
// js
const myBtn = document.querySelectorAll('.myBtn');
myBtn.forEach(function (value, key) {
  console.log(value);
  value.addEventListener('click', function () {
    let getDataText = this.getAttribute('data-text');
    console.log('getDataText', getDataText);
  });
});
```

hw1 btn color -> box color

hw2 btn photo -> box photo
